

## NEW & IMPROVED BASE SPACERS

- IMPROVED STRENGTH & RIGIDITY
- IMPROVED CRUSH TEST RATING
- IMPROVED STABILITY

### WE LISTENED!

Evolving customer needs, technological improvements, and customer input are a few factors that led CANTEX to the decision to improve our base spacers. At CANTEX, we value what our customers tell us, so we continually make changes when the end-users think we can improve our PVC electrical products. After hearing from customers who thought certain design features of our PVC spacers could be improved, CANTEX began working to improve the design of our base spacers for strength and durability while maintaining all the existing functionality and cost advantages.

#### Product Improvements to Base Spacer:

- Strengthened webbing and cross beam to improve strength and rigidity
- Significantly improved the crush test rating
- Added ¼ inch to each side of the base of all trade sizes for better stability

#### Product Description:

Base Spacers are used to create concrete encased banks that are strong and stable with consistent duct separation.

- Vertical and horizontal interlocking for fast secure field assembly
- Wide base plate provides solid support for the heaviest loads
- For use with all EB & DB and schedule 40 & 80 conduit when encased in cement
- Only base and intermediate components are needed - no banding necessary
- Material is Polystyrene
- Made in USA

### Spacer Separation Requirements:

Base spacers provide a 3" separation between bottom row of ducts & trench floor, except for 4" x 1" which is 1-3/4". To determine the trade size needed for your spacers, look at the size of the pipe and the size of the separation needed. For example, the 2 x 1-1/2 in. Base Spacer can handle up to 2" diameter conduit with 1-1/2" spacing between conduit runs.

#### NEC 70 Spacer Requirements

| Conduit Trade Size | Maximum Spacing Between Supports |
|--------------------|----------------------------------|
| 1/2 to 1           | 3 ft.                            |
